

The Deep Thinkers: March 18th Meeting

KATERINA BENEVIDES,¹ AIDAN PARFETT,¹ JUNQI QIU,¹ AND HAECHAN KIM¹

¹*EOSC 511* :)

AGENDA

Round off our stage 1 ideas, questions sent to profs on CFL, proposal should be sent in by end of day today for re-review.

1. MEETING MINUTES

4:09PM: Aidan finishing propsal, also finished 1D code. We can compute analytical solutions for when the problem only has advection or only has diffusion. We can compare our code to these analytical solutions in the cases of only advection and only diffusion.

4:10PM: delegating tasks, listed below.

4:15PM: Kat will send off proposal today after Aidan makes edits.

- Working on CFL conditions and
- in making visualizations, different bound and init conditions and see the solution over time and then when we talk about stability, we can show it being unstable for certain values (self note, initial condition for 1D model are simulating a boundary at some point)

Haechan: making code for two dimension case and have to check init/bound conditions for 2D case

Junqi: helping Haechan.

5:03 PM: meeting adjourned, Kat sent Rachel, Susan question about CFL process and if its good to add to the 1D model stage. Aidan finished up part 3 of proposal, Junqi finished up part 2 of proposal and was working on background understanding of boundary conditions in stage 2. Haechan doing stage 2 of the model. Great work everyone :)
